MySQL

MongoDB

GitHub

WebGL

Unity

WORK EXPERIENCE

Boston Realty Advisors, Boston MA — *Software Development Intern*

June 2021 - September 2021

- Queried the firm's database to generate a weekly list of possible leads based on specific criteria.
- Designed and coded web pages for new property listings to meet modern web standards.
- Assisted on weekly standup meetings to plan new UI designs to appeal more to the end user.
- Created a list of Nantucket homeowners using land records and research for each property.

CURRENT PROJECTS

E Commerce Marketplace - *In Development*

GitHub Link: https://github.com/kmruban/CSCI490_Marketplace

- Group Project from Software Engineering course at school that I am rebuilding to clean up code and to implement more functionality in both the frontend and backend.
- E-Commerce marketplace which enables consumers to register and login to their accounts to view and make purchases of products currently listed on the products page.
- Application is written with React, ASP.NET core, and MySQL.

Finance Application — *In Development*

GitHub Link: <https://github.com/kmruban/mern-finance>

- Full-stack responsive web application that allows users to easily track their finances.
- Implemented JSON Web Tokens for login and authentication as well as Bcrypt to securely store a user's password.
- Application is written with React, Node, Express, Mongoose and MongoDB.

Personal Portfolio

Website Link: <https://kylerruban.netlify.app>

GitHub Link: https://github.com/kmruban/kruban_portfolio

- React web application to showcase my skills and projects as a full-stack engineer.
- Utilized data stored in the application to display each skill and project listed.
